ABOUT ME

I am a focused Computer Engineering student with strong skills in Python and machine learning frameworks. I have a solid understanding of software development principles and enjoy working on solutions that create real-world impact. Committed to continuous learning and contributing effectively in collaborative, high-performing teams. Passionate about delivering outstanding quality and service. Self-motivated to consistently provide first-class results in line with stringent targets and deadlines.

EDUCATION

SSC - **MARCH 2021** **Percentage** - 83%

HSC - **MARCH 2023** **Percentage** - 71%

LJ UNIVERSITY

BACHELOR OF ENGINEERING (COMPUTER ENGINEERING)

2023 PERSENT

Sem 1 - 8.50 SPI

Sem 2 - 7.0 SPI

Sem 3 - 9.50 SPI

Sem 4 - 8.88 SPI

SKILL

- Data Science
- Machine Learning and Deep Learning
- Database - MySQL , MongoDB , SQLite
- Agentic AI (Learning)
- Coding Languages - Java , Python
- Web Dev - HTML, CSS , Javascript , MERN Stack

PROJECTS

Enterprise Generative AI RAG Copilot

Developed an enterprise-ready Generative AI copilot using an open-source LLM (LLaMA-3) and Retrieval-Augmented Generation (RAG) to answer questions over large document collections. Implemented semantic search with vector databases, prompt engineering, and citation-based responses to deliver accurate, grounded answers while reducing hallucinations.

Multi-Modal Fake News Detection System

Designed and deployed a fake news detection system that analyzes both news text and associated images using Transformer-based NLP and CNN-based vision models. Built a multi-modal fusion pipeline to improve detection accuracy over single-modal models and added explainable AI to justify predictions and increase trust.

Hospital Management System | Python, Django

The Hospital Management project is a Django-based web application designed to manage hospital operations efficiently. It supports CRUD operations for patients, staff, and departments with a structured database. The system provides an easy-to-use web interface through Django templates and static assets. It helps streamline record-keeping, updates, and retrieval of hospital data.
